

ULTRA-FINE FINISH ARCHITECTURAL SERIES

 **AMCON**®

ULTRA-FINE FINISH

Amcon® Ultra-Fine Finish CMUs incorporate a unique mix design different from most CMU mix designs. The mix contains finer aggregate and more cement. This, along with premium-graded sands, creates a smoother, more satin-like texture on smooth-face architectural CMUs.

- Can be specified to create a superior paintable surface on plain CMU
- Available in any of the smooth-face shapes including structural units, sills, and veneer-depth Mammoth Stone Series
- Available in over 40 colors
- Can be specified with Integral Water Repellent (IWR)
- Can be used in conjunction with Spec-Finish as part of high-performance coatings systems such as chemical-resistant finishes for rooms for sanitary requirements
