

SUSTAINABLE SOLUTIONS

RECYCLED CONTENT SERIES

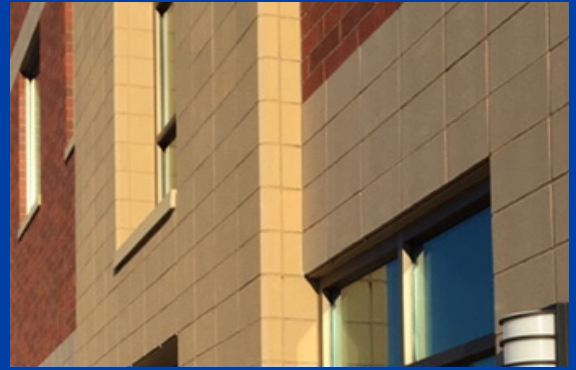

A TCC MATERIALS® COMPANY

SUSTAINABLE SOLUTIONS

Amcon® Sustainable Solutions is a family of eco-friendly mix designs that can be used for nearly all Amstone® architectural concrete masonry units (CMUs) and landscape products. Sustainable Solutions Mix is perfect for any projects, especially LEED designs and projects incorporating B3 Sustainable Guidelines.

- Utilizes a proprietary blend of recycled materials used as partial replacement for virgin sands, aggregates, and Portland cement
- Contains pre-consumer waste with a total recycled content ranging from 30-70% (50% is standard with gray block)
- Greatly reduces CO2 emissions by utilizing less virgin Portland cement than typical CMUs
- All Sustainable Solutions mix designs meet or exceed ASTM C90 criteria
- All recycled materials used in the production of Sustainable Solutions mix designs are obtained locally
