

BURNISHED BLOCK COLOR PALETTE

A TCC Materials® Masonry Brand

Check out our website

Since the mid-sixties, Amcon Burnished masonry units have been used for all types of construction, offering exclusive benefits to the building's owner, designer, and contractors.

ONE-STEP INSTALLATION: The Burnished texture delivers both structural and non-structural masonry walls in a single-step installation, handled by one contractor. This efficient process from Amcon saves valuable time and reduces overall project costs.

MOCK-UP PANEL: The mason shall build a separate mock-up wall panel that demonstrates the specified design pattern, unit type, color, and texture. This panel will also be used to evaluate workmanship, as well as appropriate cleaning and sealing methods for the masonry units.

NATURAL BEAUTY: Our Burnished block provides naturally colored aggregates from different parts of the country. They offer a wide color range and long-life performance.

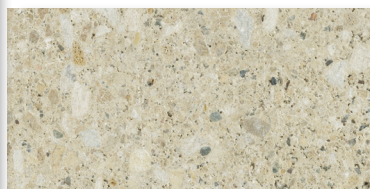

DESIGN FLEXIBILITY: Burnished blocks offer the designer flexibility through a variety of colors, scoring, chamfers, patterns, bullnose, and other special shapes.

WATER REPELLENT AND MAINTENANCE-FREE: Our Burnished block is manufactured with an integral water repellent (IWR+) admixture providing a wall that resists water absorption and a texture will last the lifetime of your building.

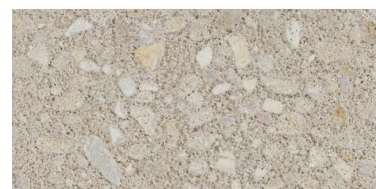

SUSTAINABILITY: Burnished units can be produced with recycled content. Our Envirotrol Curing System reclaims CO₂ which eliminates shrinkage cracks, improves color consistency, and reduces efflorescence issues.
